

Silicone washcloths and tissues

Silicone washcloths and tissues are recommended to clean the sticks or other insulating parts and devices before use, in order to remove dust, soot, oil stains or other undesirable materials from their exterior surface and to apply a thin silicone layer with waterproofing properties.

Periodical maintenance and cleaning operations of insulating sticks with silicone washcloths provide protection to the cleaned surfaces, thus leading to an increase of the life of sticks.

Washcloths are made of cotton and packed individually in plastic bags. Tissues are disposable, packed individually and in boxes of 50 units. After use, tissues can be disposed of in household waste bins.

Measuring sticks

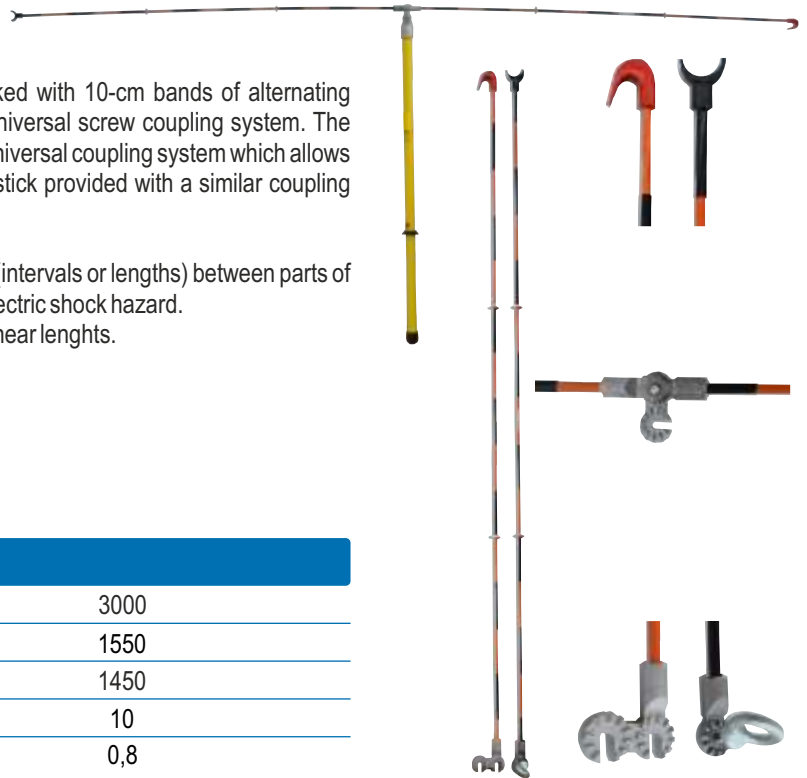

Code: TM-3000/2

Measuring sticks consist of two insulating parts (rods), marked with 10-cm bands of alternating colours (orange and black), which can be combined with a universal screw coupling system. The coupling system between rods is also provided with a second universal coupling system which allows the fixing of the entire measuring rod on top of an insulating stick provided with a similar coupling system.

The measuring stick is used for the measurement of distances (intervals or lengths) between parts of live electrical installation which cannot be approached due to electric shock hazard.

Particular flexibility of the rod allows the measurement of curvilinear lengths.

The measuring rod can be handheld with an insulating stick.

Technical characteristics

Total length (mm)	3000
Total length of one element (mm)	1550
Length of insulating rod on one element (mm)	1450
Insulating rod diameter (mm)	10
Weight (kg)	0,8

Waterproof protective tarpaulin

Code: PREL2X2

The waterproof protective tarpaulin made of thick and resistant material can be placed on the ground to protect the cleanliness of equipment and devices to be used during work or to cover them in rainy weather or during snowfall.

After use on bad weather conditions (mud, rain, etc.) it is recommended to clean the tarpaulin and dry it prior to packing and storing it.

The tarpaulin is provided with two handles for easy transportation in folded condition.

Technical characteristics

Dimensions (extended) (mm)	2000 x 2000
Dimensions (folded) (mm)	400 x 300
Weight (kg)	2,7
Colour	Blue
